Code Review Service

-from the Agnitio Support Team

If you have a need for a review of your HTML5 presentation, we offer a code review service

If you would like a fresh pair of eyes on your HTML5 code to ensure that the content is optimized for use in the Engager feel free to contact us for assistance.

The deliverable will be a completed Code Review Report checking the most common pitfalls we see:

- Performance in Engager
- Presentation Architecture (Folder structure, Separation of concerns and External libraries)
- Content (HTML, Images, Navigation and Analytics)
- Accelerator usage (if applicable)

Please note that no comparisons will be made with storyboards or other input from the creative team. We do not judge or evaluate whether the content lives up to a given brief from a client or whether the correct analytical data are being monitored. It is a review of source codes and not an assessment of content, strategy or key messages.

The code review is like building a new house - it makes sure the structure and the foundation is correct, that the windows are in the right place and the doors open and close. We are not going through the house brick-by-brick, making sure that each and every detail is in place, but you have the confidence that your house will not fall down when you need it.

The Code Review Report contains recommendations for your developers to implement. Our feedback will guide them in how to optimize the coding to improve the overall performance of the content, resulting in smooth, stable, and reliable presentations in the Engager.
