Notes on channel compatibility (continued from previous page)

- For the effective use of content in both Engager iOS and Engager Windows, we recommend the content is tested in both, and that its design reflects the different devices and their respective resolutions. We recommend the use of responsive design to allow the content to adjust for all devices, making it easier and less expensive to update and maintain

- We test changes to the Accelerator on our iPlanner and Engager apps using test HTML5 content prior to releasing. Should you find content errors, please report them to **agency_support@agnitio.com** for investigation
